FOR IMMEDIATE RELEASE

INT Releases GeoToolkit.NET 3.5

Specifically designed for the Microsoft®.NET environment, GeoToolkit.NET delivers high performance graphics capabilities for Oil and Gas E&P applications being developed in the C# language.

HOUSTON, TEXAS (March, 2013) – Interactive Network Technologies, Inc. (INT), a leading developer of high performance graphics components, announces availability of GeoToolkit.NET 3.5.

Developed for data visualization in upstream Oil and Gas, GeoToolkit.NET is a package of C# libraries including support for specialized Seismic, Contour, WellLog, and Well Schematic displays. GeoToolkit.NET also provides cutting edge features such as localization, simplified web support, and sophisticated vector object handling. GeoToolkit components speed up software development, promote reusability and consistency across applications, and allow developers to focus on their core technologies rather than spend time writing data displays.

Highlights for this new release include:

- Deviated track headers in welllog and well schematic displays
- Curves segments and symbols can be colored individually based on data source
- New multi-well capability including an advanced demo
- 16 million color mode is now supported in seismic display
- Variable depth step now supported for seismic data
- HSV color interpolation support
- Caliper curve and clipping has been added to well schematic display
- Support for MD axis for well schematic display
- Components were migrated to .NET Framework 4.0

About INT

INT is a leading supplier of graphics software components for data visualization in Upstream E&P and other technical industries. Our products include open and expandable visualization software, visualization software development components, and software development services. INT solutions support Java, C++, and .NET environments. For more information about INT, visit www.int.com or e-mail intinfo@int.com.
